Gear Tooth Speed Sensors

GS1001 – GS1002 Sensors

Hall Effect gear tooth speed sensor with adjustable stainless steel housing

Description

The GS1001-GS1002 series gear tooth speed sensors are Hall Effect devices designed for use in applications where ferrous edge detection/near zero speed sensing is needed. They provide a sinking current output.

Features

- From near zero speed up to 15 kHz sensing capability
- 10 bit dynamic threshold direction offers:
 Automatically adjusting magnetic range
 Self-compensating to target geometry
- Compatible with unregulated power supply
- RoHS compliant
- IP67
- Typical air gap of 1.5 mm*

Installation

For best results, we recommend targets made from low carbon cold rolled steel. Other factors that influence sensor performance include gear tooth height and width, space between the teeth, shape of the teeth and thickness of the target. As a general guideline, consider a target with minimum parameters as shown below. Note that smaller dimensions may work, but testing for the application is required.

| Tooth Height | Tooth Width | Distance between Teeth | Target Thickness |
|----------------|----------------|---------------------------|------------------|
| 5.0 mm (.200") | 2.5 mm (.100") | 10 mm (.400") | 6.35 mm (.250") |
