RECEIVER-MODULE FOR ENERGY HARVESTING WIRELESS SWITCHES

PRELIMINARY DATA

Description

- Standard receiver-module for energy harvesting wireless switches
- Various output options
- Suitable for wall mounting
- Designed for frequency bands in Europe (868.3 MHz) or North America (915.0 MHz).
- Flexible "Pairing" allows the operation of several receivers with one switch (and vice versa)
- "Unique ID" excludes a mutual interference between different RF-switches
- Compatible wireless switches (switch, rocker switch) available

Technical Data

Temperature range Receiving sensitivity Receiver class Operating voltage

Output interfaces

min. -95 dBm Class 2 5 V DC stabilized or 7 V up to 24V DC unstabilized, 5 V USB Low voltage relay 48 V or 230 V RS 232 TTL, RS 232 or RS 485 Bus Digital interface (high/low) or SPI USB 2.0

Frequency bands

868.3 MHz or 915.0 MHz

-40 to +85 °C
